ESD Testing

Electrical Properties	Film Surface	Adhesive Surface
Surface Resistivity * (ohm/sq.)	10 ¹³	10 ⁹
Static Decay ** (V/s)	0.50	100
Peak Voltage ** (V)	1360	200
Residual Voltage ** (V)	1330	0
Dissipation Time ** (s)	60	2.0

* Surface Resistivity is measured per EOD/ESD S.11.11 (Used Monroe Resistivity Meter, Model 272)

** Used Monroe Static Charge Analyzer, Model 276A to measure static decay rate. Ion current is increased until it reaches 70mA. The peak voltage at 70mA is recorded. After the twenty second charge duration expires, the samples charge dissipation is monitored for sixty seconds. The static decay rate is defined as the difference in peak and residual voltage as a function of dissipation time.
